POLICY ENGINE

MOCK DATA · BUDGET REHEARSAL · NOT A BUDGET ANALYSIS

Autumn Budget 2026 rehearsal (mock data)

How fifteen candidate Autumn Budget 2026 measures (fourteen in the combined run) would affect the public finances, households across the income distribution and age groups, poverty and inequality, modelled with PolicyEngine UK.

PolicyEngine · Draft, 26 October 2026

policyengine 6.11.0 · policyengine-uk 2.151.0

SUMMARY

Key findings

This is a rehearsal, not an analysis of the Budget. The fifteen measures are candidates chosen for PolicyEngine's Drill 5 (26 October 2026), several with assumed (mock) values, and every approval, Treasury figure and attestation behind these figures is mock. The Budget is on 28 October 2026.

−£13.6bn
Net effect on government revenue in 2027-28, all fourteen measures in the combined run

£122
Average change in household net income a year, 2027-28

−0.10pp
Change in the absolute poverty rate (BHC), 2027-28

- **Public finances.** Together the measures reduce revenue by £13.6bn in 2027-28, and by between £7.1bn and £13.6bn a year from 2027-28 to 2031-32. Run separately, the same fourteen reduce it by £13.9bn in 2027-28; the difference is how the measures interact. About £6.0bn of the 2027-28 cost is the employer NI relief for under-25s, which goes to employers and, with pay held fixed, does not show in household incomes.
- **The largest measures.** Averaged over 2026-27 to 2031-32, the employer NI relief for under-25s costs the most, £5.3bn a year (£6.4bn a year from 2027-28, when it is in force all year), and the dividend tax rise raises the most, £0.8bn. The threshold freeze raises more in its one year, £4.1bn in 2031-32.
- **Households.** Household net income rises by £122 a year on average in 2027-28. Gains are largest as a share of income in the poorest tenth (+0.6%); the richest tenth lose £121 a year on average, most of it from the dividend tax rise and the Business Asset Disposal Relief restriction (table in section 2).
- **Age.** People aged 16 to 24 live in households gaining £167 a year on average and people aged 65 and over £96.
- **Poverty and inequality.** Absolute poverty before housing costs falls by 0.10 percentage points in 2027-28 and the Gini index by 0.39 points (on a 0 to 100 scale); 98% of people live in a household whose net income changes.

SECTION 1

Public finances

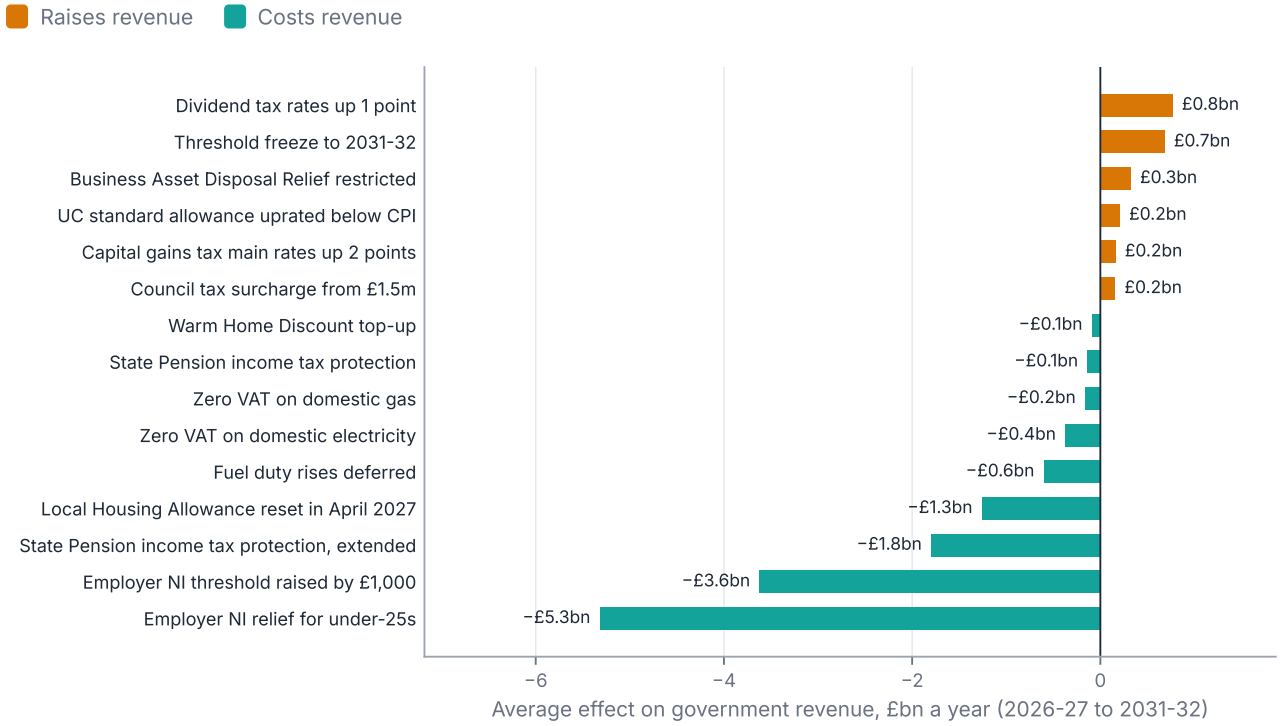

The net effect of the measures on government revenue each year, as PolicyEngine costs them: static, with no behavioural response, on the Microcosm UK 2024-25 national dataset. Below zero is a cost to the Treasury.

The fourteen measures together, by year

Change in government revenue, £bn a year. Combined run of fourteen measures (the extended State Pension protection is an alternative and left out). Source: PolicyEngine UK, Drill 5 (mock data).

Each measure, average a year

Average change in government revenue, £bn a year, 2026-27 to 2031-32. Each measure run on its own against current law. Source: PolicyEngine UK, Drill 5 (mock data).

Each measure by year, £bn

Measure	2026-27	2027-28	2028-29	2029-30	2030-31	2031-32
Dividend tax rates up 1 point	0.00	0.86	0.89	0.92	0.95	0.99
Threshold freeze to 2031-32	0.00	0.00	0.00	0.00	0.00	4.10
Business Asset Disposal Relief restricted	0.00	0.36	0.38	0.39	0.40	0.41
UC standard allowance uprated below CPI	0.00	0.23	0.24	0.25	0.26	0.26
Capital gains tax main rates up 2 points	0.00	0.19	0.19	0.19	0.20	0.20
Council tax surcharge from £1.5m	0.00	0.00	0.23	0.23	0.24	0.25
Warm Home Discount top-up	−0.55	0.00	0.00	0.00	0.00	0.00
State Pension income tax protection	0.00	−0.07	−0.10	−0.17	−0.24	−0.24
Zero VAT on domestic gas	0.00	−0.98	0.00	0.00	0.00	0.00
Zero VAT on domestic electricity	−0.73	−1.50	0.00	0.00	0.00	0.00
Fuel duty rises deferred	−0.30	−1.25	−0.52	−0.52	−0.50	−0.52
Local Housing Allowance reset in April 2027	0.00	−1.41	−1.45	−1.50	−1.57	−1.62
State Pension income tax protection, extended	0.00	−0.91	−1.54	−2.22	−2.94	−3.17
Employer NI threshold raised by £1,000	0.00	−4.30	−4.32	−4.35	−4.37	−4.39
Employer NI relief for under-25s	0.00	−6.01	−6.18	−6.36	−6.56	−6.82
Combined run (fourteen measures)	**−1.58**	**−13.60**	**−10.37**	**−10.62**	**−10.90**	**−7.15**

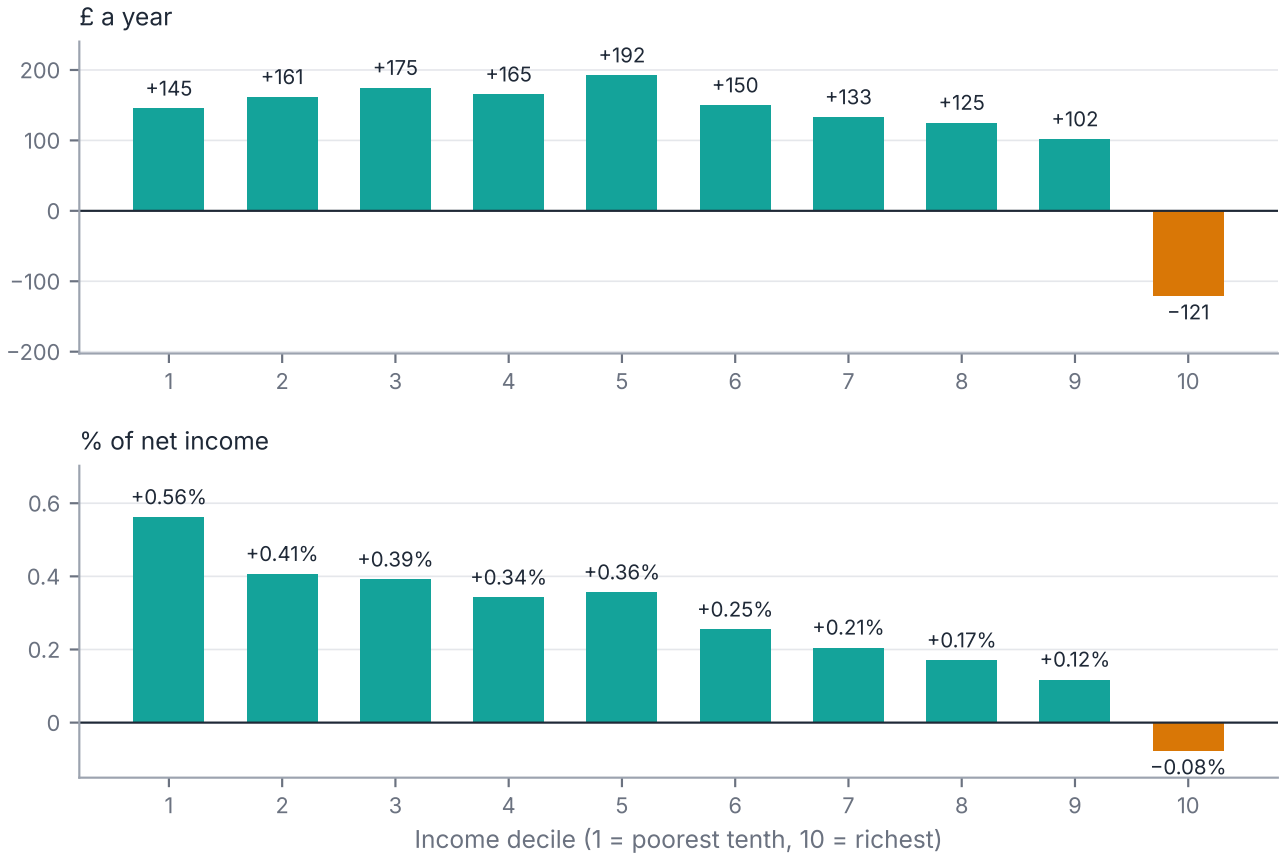

Negative values cost revenue. Each row is a measure on its own; the combined run includes the interactions between them and leaves out the extended State Pension protection.

SECTION 2

Households by income

How household net income changes across the income distribution in 2027-28, with all fourteen measures in place. Households are ranked into tenths (deciles) by their equivalised net income before the measures.

Average change in household net income by income decile, 2027-28

Top: £ a year. Bottom: % of net income. Here teal is a gain to households and amber a loss (in section 1 the same colours mean a cost to and a gain for the Treasury). Source: PolicyEngine UK, Drill 5 (mock data).

> The measures that raise revenue from dividends, capital gains and business disposals fall mostly on the richest tenth. The zero VAT on electricity and gas, the fuel duty deferral and the Local Housing Allowance reset raise lower incomes most as a share of income; setting the Universal Credit standard allowance below current law lowers them. The employer NI measures change no household's income here, because pay is held fixed.

Who gains and loses, by measure, 2027-28

Measure	Poorest tenth, £ a year	Richest tenth, £ a year	People 65+, £ a year
Dividend tax rates up 1 point	−4	−194	−22
Business Asset Disposal Relief restricted	−3	−82	−15
UC standard allowance uprated below CPI	−18	−1	−2
Capital gains tax main rates up 2 points	−5	−14	−10
State Pension income tax protection	+2	0	+8
Zero VAT on domestic gas	+28	+44	+35
Zero VAT on domestic electricity	+46	+66	+51
Fuel duty rises deferred	+29	+55	+39
Local Housing Allowance reset in April 2027	+69	+6	+13
State Pension income tax protection, extended	+9	+35	+109

Average change in household net income for households in the poorest and richest tenths, and for people aged 65 and over. Measures with no effect in 2027-28 are left out.

Households and poverty, by measure, 2027-28

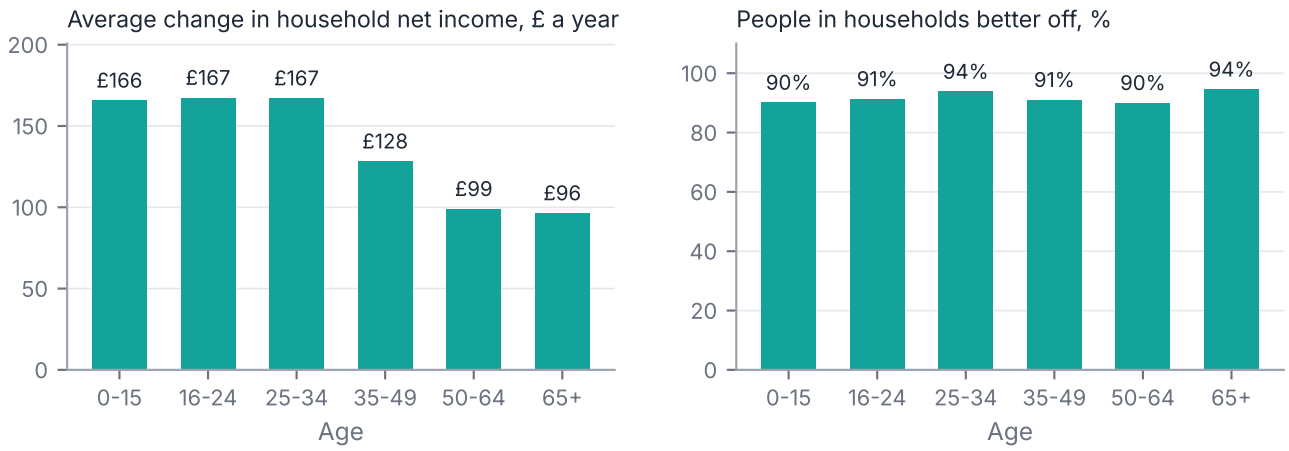

Measure	Avg £ a year	People affected	Poverty (pp)	Gini points
Dividend tax rates up 1 point	−29	7.6%	0.00	−0.066
Threshold freeze to 2031-32	0	0.0%	0.00	0.000
Business Asset Disposal Relief restricted	−12	0.1%	0.00	−0.046
UC standard allowance uprated below CPI	−8	21.2%	+0.05	+0.028
Capital gains tax main rates up 2 points	−7	0.9%	0.00	−0.019
Council tax surcharge from £1.5m	0	0.0%	0.00	0.000
Warm Home Discount top-up	0	0.0%	0.00	0.000
State Pension income tax protection	+2	2.2%	0.00	−0.006
Zero VAT on domestic gas	+33	81.4%	0.00	−0.040
Zero VAT on domestic electricity	+51	96.5%	0.00	−0.064
Fuel duty rises deferred	+43	78.3%	0.00	−0.046
Local Housing Allowance reset in April 2027	+48	3.4%	−0.14	−0.131
State Pension income tax protection, extended	+31	17.5%	−0.02	−0.023
Employer NI threshold raised by £1,000	0	0.0%	0.00	0.000
Employer NI relief for under-25s	0	0.0%	0.00	0.000

Average change in household net income over all households; people in households whose net income changes; change in the absolute poverty rate before housing costs; change in the Gini index of equivalised household net income. A measure starting after 2027-28 shows no effect in this year.

SECTION 3

Young people and pensioners

The same package by age, in 2027-28: the average change in the net income of the households people live in, and the share of people in households that are better off.

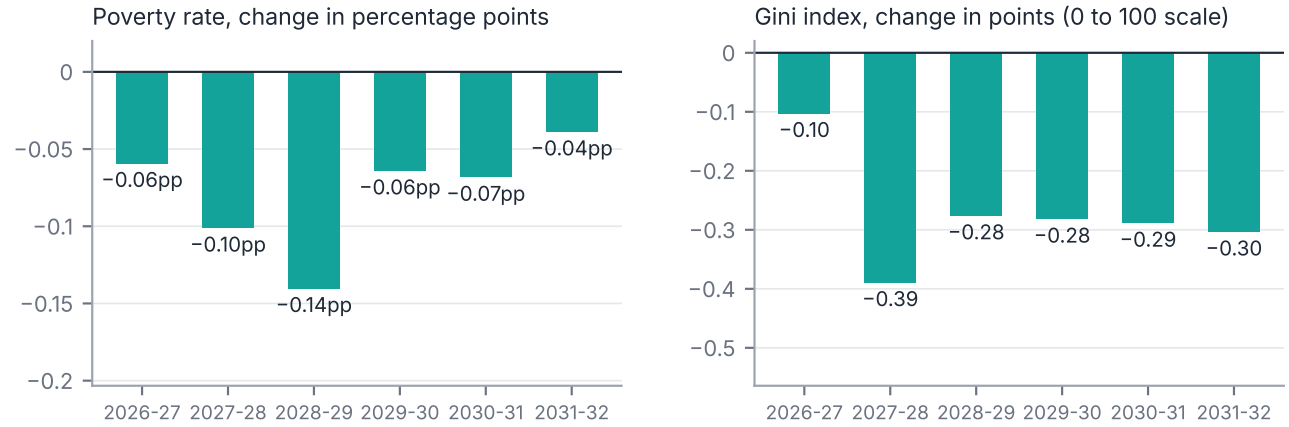

Per person, by the age of the person; household income is shared by everyone in the household. Source: PolicyEngine UK, Drill 5 (mock data).

The employer NI relief applies to the earnings of 21 to 24-year-olds but, with pay held fixed, raises none of their incomes here. For people aged 65 and over the largest gains come from zero VAT on electricity, the fuel duty deferral and zero VAT on gas (table in section 2). The State Pension income tax protection adds £8 a year on average across them, because it reaches only those whose only income is the State Pension.

SECTION 4

Poverty and inequality

The change in absolute poverty before housing costs (below 60% of the 2024-25 median, held fixed in real terms) and in the Gini index of equivalised household net income, with all fourteen measures, by year.

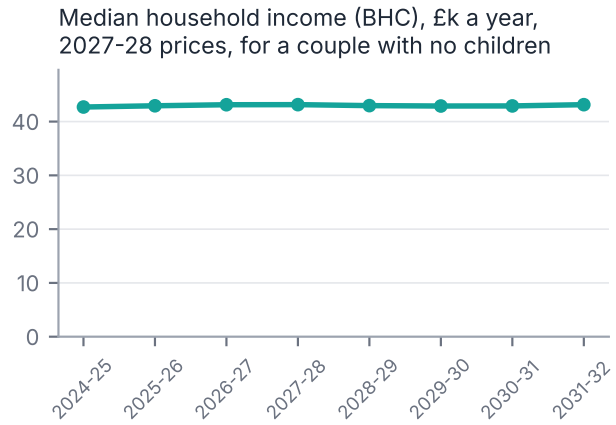

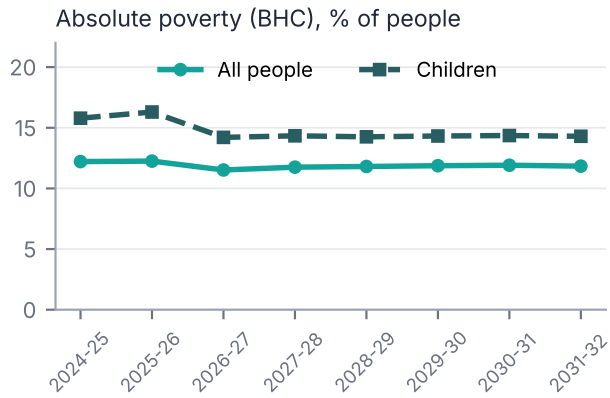

Left: percentage points. Right: Gini points on a 0 to 100 scale. Teal is a fall. Source: PolicyEngine UK, Drill 5 (mock data).

SECTION 5

The outlook before the measures

PolicyEngine's projection of living standards under current law, before any of the measures: real median household income and absolute poverty, from 2024-25 to 2031-32. These are the baseline the measures change.

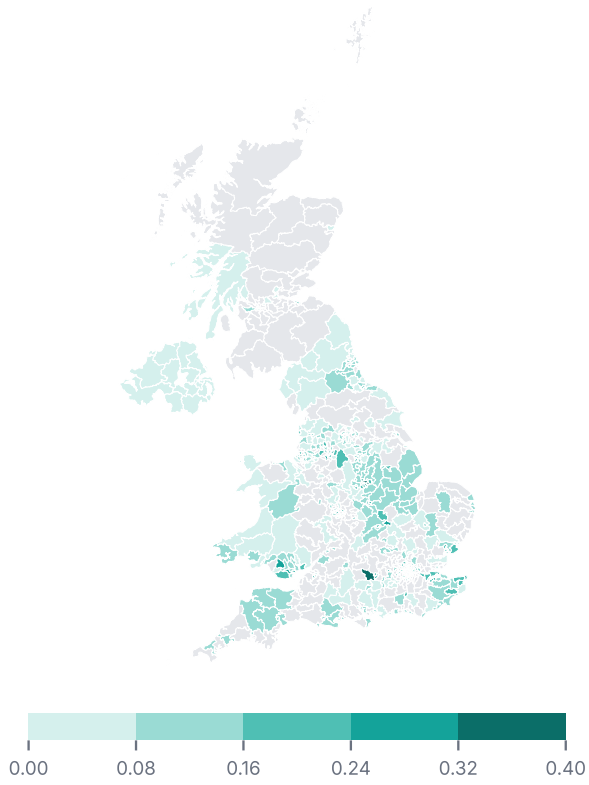

Equivalised household net income before housing costs; poverty below 60% of the 2024-25 median, fixed in real terms. Baseline projection on policyengine-uk 2.132.6 and the 19 October Microcosm national build (the outlook published on the dashboard, not regenerated for this drill). Modelled incomes at the bottom and middle of the distribution are higher than in the official HBAI statistics (the median by about 6%), so modelled poverty rates sit below the official ones.

SECTION 6

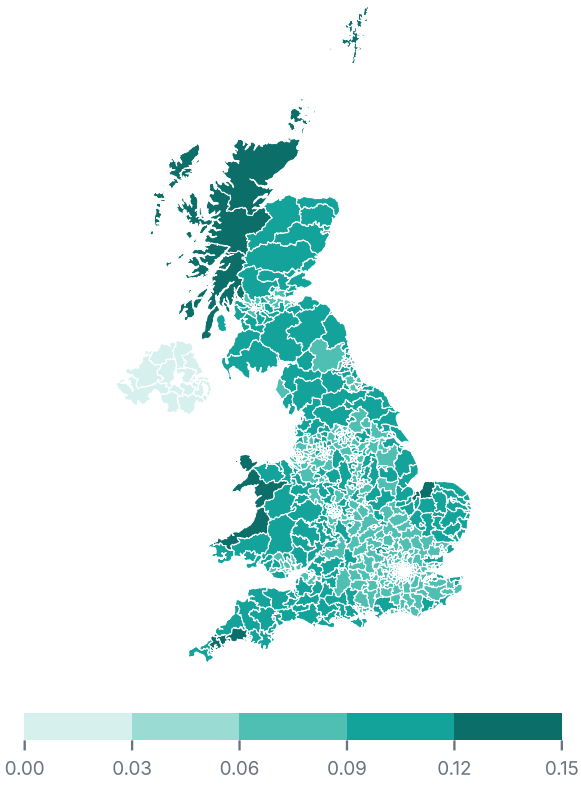

Results by constituency

Average change in household net income by Westminster constituency (2024 boundaries) in 2027-28, as a share of income, for two measures whose effect varies by place. Every measure is published by constituency on the dashboard.

Local Housing Allowance reset in April 2027
% of household net income

Zero VAT on domestic electricity
% of household net income

Grey: withheld, where the estimate is too uncertain or could disclose survey records (303 of 650 seats for the Local Housing Allowance reset, which reaches few households in each seat; 0 for zero VAT on electricity, which is for Great Britain only, so Northern Ireland's seats show no change). Microcosm's local-area data, disclosure-controlled. Source: PolicyEngine UK, Drill 5 (mock data).

SECTION 7

The measures

The fifteen candidate measures in Drill 5, ordered from the largest revenue raiser to the largest cost. Values marked mock are drill choices where reporting gave no figure.

Measure	What it does, as modelled
Dividend tax rates up 1 point	Raises each dividend tax rate by 1 point (mock).
Threshold freeze to 2031-32	Holds the personal allowance and basic rate band in 2031-32.
Business Asset Disposal Relief restricted	Cuts the Business Asset Disposal Relief lifetime limit from £1m to £500,000.
UC standard allowance uprated below CPI	Sets the Universal Credit standard allowance 1% below current law from April 2027 (mock).
Capital gains tax main rates up 2 points	Raises the main capital gains tax rates to 20% and 26% (mock); static.
Council tax surcharge from £1.5m	Starts the high value council tax surcharge at £1.5m, £2,500 a year, from April 2028 (mock).
Warm Home Discount top-up	Raises the Warm Home Discount from £150 to £250 for winter 2026-27.
State Pension income tax protection	An income tax allowance equal to the full new State Pension for pensioners whose only income is the State Pension.
Zero VAT on domestic gas	Removes the 5% VAT on domestic gas for 2027-28 (mock), Great Britain only.
Zero VAT on domestic electricity	Removes the 5% VAT on domestic electricity, Great Britain only.
Fuel duty rises deferred	Holds fuel duty at 52.95p a litre through winter 2026-27 and restores the 5p in two steps in 2027-28.
Local Housing Allowance reset in April 2027	Resets Local Housing Allowance to the 30th percentile of rents in April 2027, then freezes it.
State Pension income tax protection, extended	As above, never withdrawn: an alternative, left out of the combined run.
Employer NI threshold raised by £1,000	Raises the employer NI secondary threshold from £5,000 to £6,000 (mock), at fixed pay.
Employer NI relief for under-25s	No employer NI on earnings of 21 to 24-year-olds up to the upper secondary threshold.

SECTION 8

Method, data and caveats

Model and data

PolicyEngine UK, a microsimulation model of the UK tax and benefit system, through policyengine 6.11.0 (policyengine-uk 2.151.0), on the Microcosm UK 2024-25 national dataset (microcosm-uk-2024-25-national-20261025T091414Z-a6299504). We simulated each measure on its own against current law, and the fourteen together in one combined run, for 2026-27 to 2031-32. We ran them in the cloud, one machine per measure; each run records its inputs and package versions.

What the figures leave out

- **Static costings.** No behavioural response: capital gains, dividends, fuel and energy use and pay are held fixed. The employer NI measures are costed at fixed pay, so they change no household's income.
- **Known gaps in three measures** (from PolicyEngine's review of the drill measures, not fixed in this run): the capital gains measure leaves the additional rate at 24%; the Local Housing Allowance reset leaves Northern Ireland frozen; the dividend measure leaves the £10m bracket unchanged.
- **Combined run.** Fourteen measures: the extended State Pension protection is an alternative design and left out.
- **The outlook** in section 5 is the dashboard's published baseline on the earlier pin (policyengine-uk 2.132.6), not regenerated for this run.

Rehearsal status

Every approval, attestation and Treasury figure behind these numbers is MOCK, made for Drill 5 only. The measures are candidates, several with assumed values, and none has been announced. Nothing here is PolicyEngine's analysis of the Autumn Budget 2026.

Replication: github.com/PolicyEngine/uk-autumn-budget-dashboard-2026, branch drill5-wednesday-path-newpair (figures) and drill5-on-185-template (flat files). Drill log: issue #144.
